GENERAL INDEX TO VOLUME XI.

NOTE.—The January number contains pages from 1-96, February, 97-176; March, 177-256; April, 257-352; May, 353-448; June, 449-544; August, 545-640; October, 641-752, November, 753-848, December, 849-944. No further reference will be made to the monthly issues of this Journal. The numbers following the tiles are the pages of the volume. This volume is numbered XI in continuation of the series of the ten volumes previously published under the name of THE SIDEREAL MESSENGER.

Aberration, Effect of, on measures of solar prominences (note).....90, 160
Aberration, Mascart..... 128
Aberration, Remarks on the influence of the, of light on spectroscopic observations of solar prominences, Fizeau..... 126
Abney, W. de W., Limit of the visibility of the different rays of the spectrum..... 296
Abroad and at home by Phillips..... 639
Absorption of heat in the solar atmosphere, W. E. Wilson..... 49
Absorption, observations on thermal, in solar atmosphere, made at Potsdam, E. B. Frost (note)..... 720
Absorption of radiant energy..... 823
Absorption spectra of metallic films..... 520
Academy of Sciences at Chicago, meetings of.....635, 846
Adams, Professor J. C. (note)..... 446
Address, Professor Schuster's, before the British Association..... 739
Aerolite in court (note)..... 841
Aids to temporary star search (note)..... 944
Albedo of planets, On the relative, by Monck..... 776
Algebra by G. W. Jones..... 639
Algol, The true form of its light curve, J. Plassmann..... 419
Aluminium oxide, the spectrum of, B. Hasselberg..... 793
Ames, Joseph S., Concave grating in theory and practice..... 28
Appel, D., A free escapement with a perfectly independent balance or pendulum..... 872
Application of interference methods to spectroscopic measurements, A. A. Michelson..... 884
Aries, A new double star in (note)..... 751
Archenhold's bibliography (note)..... 349
Asteroids, Two new (note), [see Minor planets]..... 939
Astronomical and physical society of Toronto.....346, 637, 846
Astronomical chart, a curious old, by Grainger (note)..... 844
Atronomical exhibit at world's Columbian exposition, G. E. Hale..... 305
Astronomical lectures by J. K. Rees (note)..... 341
Astronomical photography with commercial lenses, W. Harkness..... 641
Astronomical society, Camden, N. J., Meeting of 1891..... 256
Astronomical society of the Pacific, Meetings of.....256, 636
Astronomy, Campbell's handbook..... 544
Astro-Physical Journal, G. E. Hale..... 17
The editorial board of Astro-Physics..... 822
Athens national observatory (note)..... 350
Atmosphere, On the absorption of heat in the solar, W. E. Wilson..... 49
New researches on the solar—M. H. Deslandres.....60, 314
Observations on the thermal absorption in the solar, made at Potsdam, E. B. Frost..... 720
The lunar, and the recent occultation of Jupiter, W. H. Pickering..... 778
On the mass of the Earth's atmosphere..... 930
Auriga, The new star in, E. C. Pickering..... 228
On the visible spectrum of, Henry Crew, 231; 233 (note); of Deslandres, 712; 249; (note) 847; Observations of, made at Princeton by C. A. Young and Taylor Reed, 289; 328, (note), 346, (note)..... 434

GENERAL INDEX TO VOLUME XI.

NOTE.—The January number contains pages from 1-96, February, 97-176; March, 177-256; April, 257-352; May, 353-448; June, 449-544; August, 545-640; October, 641-752, November, 753-848, December, 849-944. No further reference will be made to the monthly issues of this Journal. The numbers following the tiles are the pages of the volume. This volume is numbered XI in continuation of the series of the ten volumes previously published under the name of THE SIDEREAL MESSENGER.

Aberration, Effect of, on measures of solar prominences (note).....90, 160
Aberration, Mascart..... 128
Aberration, Remarks on the influence of the, of light on spectroscopic observations of solar prominences, Fizeau..... 126
Abney, W. de W., Limit of the visibility of the different rays of the spectrum..... 296
Abroad and at home by Phillips..... 639
Absorption of heat in the solar atmosphere, W. E. Wilson..... 49
Absorption, observations on thermal, in solar atmosphere, made at Potsdam, E. B. Frost (note)..... 720
Absorption of radiant energy..... 823
Absorption spectra of metallic films..... 520
Academy of Sciences at Chicago, meetings of.....635, 846
Adams, Professor J. C. (note)..... 446
Address, Professor Schuster's, before the British Association..... 739
Aerolite in court (note)..... 841
Aids to temporary star search (note)..... 944
Albedo of planets, On the relative, by Monck..... 776
Algebra by G. W. Jones..... 639
Algol, The true form of its light curve, J. Plassmann..... 419
Aluminium oxide, the spectrum of, B. Hasselberg..... 793
Ames, Joseph S., Concave grating in theory and practice..... 28
Appel, D., A free escapement with a perfectly independent balance or pendulum..... 872
Application of interference methods to spectroscopic measurements, A. A. Michelson..... 884
Aries, A new double star in (note)..... 751
Archenhold's bibliography (note)..... 349
Asteroids, Two new (note), [see Minor planets]..... 939
Astronomical and physical society of Toronto.....346, 637, 846
Astronomical chart, a curious old, by Grainger (note)..... 844
Atronomical exhibit at world's Columbian exposition, G. E. Hale..... 305
Astronomical lectures by J. K. Rees (note)..... 341
Astronomical photography with commercial lenses, W. Harkness..... 641
Astronomical society, Camden, N. J., Meeting of 1891..... 256
Astronomical society of the Pacific, Meetings of.....256, 636
Astronomy, Campbell's handbook..... 544
Astro-Physical Journal, G. E. Hale..... 17
The editorial board of Astro-Physics..... 822
Athens national observatory (note)..... 350
Atmosphere, On the absorption of heat in the solar, W. E. Wilson..... 49
New researches on the solar—M. H. Deslandres.....60, 314
Observations on the thermal absorption in the solar, made at Potsdam, E. B. Frost..... 720
The lunar, and the recent occultation of Jupiter, W. H. Pickering..... 778
On the mass of the Earth's atmosphere..... 930
Auriga, The new star in, E. C. Pickering..... 228
On the visible spectrum of, Henry Crew, 231; 233 (note); of Deslandres, 712; 249; (note) 847; Observations of, made at Princeton by C. A. Young and Taylor Reed, 289; 328, (note), 346, (note)..... 434

Auriga, The new star in, Observations of, by Agnes M. Clerke, 504; The temporary star in, G. Rayet, 291; A change in the spectrum of Nova (note), 330; On the new star in the constellation of, H. Seeliger..... 904
Auriga, A large new nebula in, J. M. Schaeberle (note)..... 523
The visible spectrum of Nova, W. W. Campbell (note)..... 529
Auriga, on the new star in the constellation of, Ralph Copeland and L. Becker..... 593
Aurigæ, Observations of Nova, Vassar Collge, Observatory, M. W. Whitney 461
The motion of Nova, in line of sight, H. Vogel, 391; Nova, E. C. Pickering. 417
Aurigæ, On Nova, Wm. Huggins and Mrs..... 571
Aurigæ, Nova, Walter Sidgreaves..... 604
Recent observations of Nova, W. W. Campbell, 715; A new outburst of Nova (note), 737; Nova, E. C. Pickering (note) 750; Nova, a nebula, E. E. Barnard (note), 751; The spectrum of Nova, in February and March, 1892, W. W. Campbell, 799; Newall's observations of Nova (note), 828; Nova (note), 934; Professor Seeliger's explanation of Nova (note)..... 929
Aurora, A remarkable..... 173
The Sun-spots, the magnetic storm and the, 316; Radiant energy the probable cause of solar corona; Comæ and tails of comets and the, by Corrigan, 362; Magnetic disturbances and, 617; Of Feb. 13, 1892 (note), 237, 249; The, April 25, 1892 (note), 521; Of May 18, 1892, Mt. Hamilton, 539; Providence, R. I., 539; Of June 21, 1892, Mt. Hamilion, E. E. Barnard (note), 633; Of July 16, 1892, observed by Clute (note), 624; Observations by M. A. Veeder.....87, 175
Auroras, The, of January 1892, M. A. Veeder (note)..... 239
The relation between Sun-spots and (note).....434, 436
Babylonian astronomy researches (note)..... 347
Ball, Appointment of Sir Robert, as Professor Adams' successor at Cambridge (note)..... 337
Barnard, E. E., Observations of eclipse of the Moon, Nov. 15, 1892 (note)..... 92
Disappearance of new red spot on Jupiter (note), 93; Transparency of Crape Ring, other peculiarities shown by eclipse of Iapetus, 119; Observations and photographs of Swift's comet (March 6, 1892), 386; Aurora at Mt. Hamilton (note), 539; Brilliant aurora at Mt. Hamilton, June 26 (note), 633; Preliminary remarks on the observations of Mars, 1892, with 12-inch and 36-inch refractors of Lick Observatory, 680; Recent observation's of Jupiter, the Great Red Spot and its changes, 686; Discovery of a fifth satellite of Jupiter (note), 749; Nova Aurigæ a nebula (note)..... 751
Barnes, Willis L., Dark transit of Jupiter's III satellite..... 94
Barnum, Charlotte C. Sophie Kowalaveski..... 281
Bielid meteors, The shower of (note)..... 943
Bigelow, Frank H., Photographic method of determining star transits..... 42
Simple mounting for large telescopes in field eclipse observations..... 257
Binary star, note on the new, β 612, 268; β 208, 464; 52 Herculis (β 627), 465; Note on Glasenapp's orbit of (β 612), S. W. Burnham..... 466
Biographical sketch of Robert Grant..... 878
Bjerkness study of the absorption of radiant energy (note)..... 823
Boisbaudran's observations on the electric spectra of gallium, (note)..... 520
Boraston, J. Maclair, solar halo and mock suns (note)..... 522
The aurora of April 25, 1872 (note)..... 521
Book Notices, Worcester's comprehensive dictionary, 96; Differential calculus by Edwards, Hussy's logarithmic and mathematical tables, Chapman's theory of equations, Campbell's handbook of practical astronomy, 543, 544; Milne's high school algebra, Miller's trigonometry, Jones' drill-Book in algebra, Miller's determinants, 638, 639; McLennan's cosmical evolution, Bubier's questions and answers about electricity.....847, 848
Brashear, J. A., George Bassett Clark..... 367
The new Jena glass (note), 447; Trip to Europe (note)..... 628
Brightness of a comet, how to compute it (note)..... 943
Brooks, William R., discovery of comet *d* (Brooks)..... 697
Brown, Elizabeth, unusual appearance in a Sun-spot (note)..... 925
Burnham, S. W., measures of planetary nebulæ (note)..... 174
Measures of faint double star (H 2948) between β^1 and β^2 Capricorni, 173; Note on the new binary Star β 612, 268; New binary star β 208, 464

Burnham, S. W., Binary star 52 Herculis, (β 627), 465; Note on Glasenapp's orbit of β 612 (note), 466; The double star π^2 Ursæ Minoris Σ (1989), 548; The proper motion of Σ 1603, 549; The new enlarging photographic lens, 558; The resignagtion of, from Lick Observatory (note), 616, 628; The double star $O\Sigma$ 224, 661; The double star Σ 1216..... 662
On proper motion of Σ 1604..... 870
Calculus by Edwards..... 543
Campbell, W. W., the reduction of spectroscopic observations of motions in the line of sight..... 319
The spectrum of comet *a*, 1892, 698, 523; Recent observations of Nova Aurigæ, 715; On the visible spectrum of Nova Aurigæ, 529; Photography of the great Sun-spot at the Lick Observatory (note), 334; The spectrum of Nova Aurigæ in February and March, 1892, 799; Recent observations of Nova Aurigæ, Sept. 8 to Oct. 13, 1892..... 820
The motion of Nova Aurigæ..... 881
Cepheus, Group of stars of 5th type in, E. C. Pickering (note)..... 235
Chicago, The Yerkes Observatory of the University of, G. E. Hale..... 790
Chromosphere spectrum, Note on the, C. A. Young..... 59
Chromosphere, The spectra of Sun-spots and the (see solar prominences);... 613
Chromosphere line, The, Engstrom 6676.9..... 162
Clark, George Bassett, Biographical sketch of, by Brashear..... 367
Clerke, Agnes M., The new star in Auriga..... 504
Coakley, George W., are comets or any portion of them repelled from the Sun?, 97; Tidal theory of the forms of comets, 177; Some additional facts relating to Comets, 652; Probable origin of meteorites..... 753
Coimbra, meteorological observations..... 632
Collins, F. Howard, the cyclone theory of Sun-spots..... 826
Color curve of a lens, On a simple method of obtaining the, by Henry Crew. 933
Colors, On the photography of, by M. G. Lippmann (note)..... 524
Columbian exposition, the astronomical exhibit at the World's—George E. Hale..... 305
Comet *a*, 1892 (Swift March 6) discovery of, by Swift, 342; Elements of, by Searle, Harpham and Sivaslian, 342; Elements and Ephemeris, by Sivaslian and Harpham, 344; Observations and photographs of, by E. E. Barnard, 386; Elements of, by Wendell, 443; Ephemeris of, for May and June, 444; Elements of, by Wendell, 536; Ephemeris of, by Wilson and Harpham, 536; Elements of, by Miss F. E. Harpham, 625; Ephemeris of, by Wendall, 625; Spectrum of, by Campbell, 698; Ephemeris of, 747, 748; Ephemeris of, by G. A. Law, 836; Ephemeris of..... 942
b, (Winnecke's periodic) ephemeris for January and February, 86; for March and April, 170; Re-discovery of, at Vienna, 342; Ephemeris for May and June, 444; Ephemeris of, June and July, 536; Ephemeris of, August and September, 626; Ephemeris of, October and November, 747, Ephemeris of, November and December..... 837
Brooks, 1886 IV, search ephemeris.....85, 169, 251, 343, 443
Brorson's short period, by George A. Hill, 7; Reply of F. Lamp to Mr. Hill (note), 251; Mr. Hill's reply to Mr. Lamp (note)..... 343
c, 1892 (Denning), Discovery of, 343; Elements and ephemeris of, May and June..... 445
d, 1892, (Brooks, August 28) Discovery of, 697; Elements and ephemeris of, 746; Elements and ephemeris of, 835; Hill's elements and ephemeris of, 941
e, 1892, (Barnard Oct. 12) discovered by photography, 835; Elements and ephemeris by Campbell, 835; Elements compared with those of Wolf's comet (note)..... 941
e, 1891 (Barnard Oct. 2) elements by Wendell, 87; Ephemeris of, Wendell, 251
f (Holmes), Discovery of (note), 940; Elements of by Sivaslian, Kreutz and Searle, 941; Seen by R. M. Smythe (note), 941; Spectrum of, by Keeler..... 929
g, 1892 (Brooks, Nov. 19) Discovery of (note)..... 941
The Tempel-Swift periodic, Ephemeris of..... 85
Wolf's periodic, Ephemeris of.....86, 170
Next apparition of..... 169
1867 II, Temple's first periodic, elements and search ephemeris.....250, 343
Comet Notes.....85, 169, 250, 342, 443, 536, 625, 746, 835, 940
Comet, How to compute the relative brightness of (note)..... 943
Comets and meteors by Monck (note)..... 171

Comets and Meteors, A further note on, by Monck 274
Comets, Are, or any portion of them repelled by the Sun, by G. W. Coakley? 97
Captured by planets by Newton, 12; corona, comæ and tails of, and the Aurora Borealis by Corrigan, 362; How designated this year (note), 443; Some additional points relating to, by Coakley, 652; Tidal theory of the forms of, by Coakley, 177; Visible number, five, 835; Three new (note) 940
Common, A. A., Silvering glass mirrors 852
Companion to the Observatory (note) 87
Comstock, George C., Observations of Mars at Madison 676
Copeland, Ralph, A new star in Auriga (note) 233
Biographical sketch of Robert Grant 878
On the new star in the constellation of Auriga, 593; Pretended early discovery of a satellite of Mars 553
Corona, Radiant energy a probable cause of the solar, comæ and tails of comets and Aurora Borealis by S. J. Corrigan 362
Electrical discharges through poor vacua and on coronoidal discharges.. 483
Corrigan, Severinus J., Effect of pressure on the transmission of radiant energy through gaseous media 1, 108
Radiant energy a probable cause of the solar corona, comæ and tails of comets and the Aurora Boralis 362
Cortie, A. L., The large Sun-spot group of Aug. 28—Oct. 4, 1891 130
Some recent studies on the solar spectrum, 393; Notes on the spectra of Sun-spots 587
Cosmical evolution by McLennan 847
Crew, Henry, Note on the measurement of solar prominences (note) 90
On the visible spectrum of the new star in Auriga, 231; Note on the spectrum of the large Sun-spot group of Feb. 1892, 308; Pringsheim on Kirchhoff's law, 581; On a simple method of obtaining the color curve of a lens, 933; Election as professor of physics in Northwestern University (note), 617; Solar observations at Mt. Hamilton (note) 824
Current celestial phenomena 80, 163, 243, 337, 438, 520, 628, 742, 831, 936
Denning, W. F., Physical nature of shooting stars and aerolites 481
Denza's photograph of the ring nebula of Lyra (note) 523
Deslandres, H., New researches on the solar atmosphere 60, 314
New results on hydrogen obtained by spectroscopic study of the Sun, comparison with the new star in Auriga, 712; On a remarkable prominence, 502; Researches on the radial motion of stars with a siderostat of the Paris Observatory 157
Determinants by G. A. Miller 639
Dewar, J., G. D. Liveing and, On the influence of pressure on the spectra of flames, 215; On the spectra of liquid oxygen, and on the refractive indices of liquid oxygen, nitrous oxide and ethylene 705
Dixon, S. M., The photo-electric effect of star light (note) 844
Double star observations by Professor Hall, 631; π^2 Ursæ Minoris (Σ 1989) by Burnham, 548; Measures of faint, (H 2948) between β^1 and β^2 Capricorni, by Burnham, 173; $O\Sigma$ 224, List of measures by S. W. Burnham, 661; Σ 1216, List of measures by S W. Burnham 662
Double stars, Note on, by G. W. Hough 349
Draper, Mrs. Henry, Reception to the National Academy of Sciences 78
Catalogue, The proper motions of stars in the, W. H. S. Monck (note) 253
Dudley Observatory, rebuilding of the (note) 630
Dudley, W. L., The absorption spectra of metalic films (note) 528
Duner's observations of sunspots and the photosphere (note) 241
Earthquake, February 23, 1892 470
Earth's atmosphere, On the mass of the (note) 930
Eclipse of the moon, Nov. 15, 1891, observations of, at Boston University, 91; observations, by E. E. Barnard, Lick Observatory 92
The total solar, April 15 and 16, 1893, H. S. Pritchett, 454, 562; of the moon, photographs of the recent total (note), 160; Solar, behavior of the arrowhead in the C line in a 926
Eginitis Demetrits, Director of the Observatory of Athens 351
Egyptian Phœnix, explanation of the mystery of the, by T. J. J. See 457
Electricity by Bubier 848
Electric spectra of gallium, M. Lecoq de Boisbaudran's observations (note).. 520
Method for detecting and exhibiting Hertzian vibrations (note) 823

Index to this volume by months, preceding page.... 1
Interference methods to spectroscopic measurements, On the application of, A. A. Michelson.... 884
Iron, The, spectrum, as a comparison spectrum in spectroscope determinations of stellar motion in line of sight, H. C. Vogel.... 151
Janssen, J., Note on a Sun-spot observed at Meudon Observatory, from Feb. 5 to Feb. 17, 1892.... 334
Jacoby, Harold, The German variation of latitude work.... 471
Jesse, O., W. Foerster and, Request for observations on night clouds.... 859
Jupiter, Observations of, with the 16-inch equatorial of Goodsell Observatory.... 189
Observations of spots and markings by G. W. Hough, 193; Recent observations of the great red spot and its changes by E. E. Barnard, 686; the lunar atmosphere and the recent occultation of, W. H. Pickering.... 778
Jupiter's new red spot, The disappearance of, by E. E. Barnard, (note).... 93
Jupiter's great red spot on central meridian, ephemeris of....82, 622, 744, 833
Fourth satellite, peculiar appearance of, G. E. Lumsden and H. C. Wilson (note), 93; Fifth satellite, account of the discovery of, by E. E. Barnard, 749; Fifth satellite, letter from Professor C. A. Young, 840; First satellite, double shadow of, H. S. Hulbert (note), 87; Path at opposition in 1892, Illustration of, 530; Third satellite, dark transit of, by H. S. H ulbert, 94; Satellites, configuration of, 82, 532, 623, 745, 834, 938; Satellites, phenomena of....82, 532, 672, 744, 833, 938
Jupiter's fifth satellite by Professor Hough (note).... 945
Kayser and Runge, On the spectra of the elements (note).... 522
Keeler, James E., Note from, concerning his resignation at Mt. Hamilton.... 840
Lecture on the nebular hypothesis, 567, 768; The star spectroscope of the Lick Observatory, 140; On the central star of the ring nebula in Lyra (note), 824; Occultation of Mars, Sept. 3, 1892 (note), 831; The spectrum of Holmes' comet.... 929

Kenwood Observatory, photographs of solar prominences obtained with the spectroheliograph of the, G. E. Hale, 603; Photographs of the occultation of Mars by the moon made at the, G. E. Hale, 610; Progress on solar photography at the, 235; (note), 741; Solar photography at the, George E. Hale, 407; Visit to, by H. C. Wilson..... 634
King, John, Total eclipse of the Sun, 1893..... 863
Kirchhoff's law, Pringsheim on, Henry Crew..... 581
Kirkwood, Daniel, Group of asteroids..... 785
Knapp, Manning M., interest in good lenses..... 254
Kowalevski, Sophie, by Charlotte Burnham..... 281
Latitude, The German variation of, by H. Jacoby, 471; On the distribution of solar phenomena observed at the Royal Observatory of the Roman College during first half of 1891, P. Tacchini, 134; On observations during second half of 1891, 424; Observations during the first quarter of 1892, P. Tacchini..... 605
Le Chatelier, H., The temperature of the Sun..... 178
Line, On a simple method for determining the color curve of a, Henry Crew. 933
Lick Observatory, Solar work at the..... 78
And its work (note), 89; Photography of the great Sun-spot at the, W. W. Campbell (note), 334; The star spectroscope of the, 140; The changes in the staff of (note), 628; Letter from Professor Keeler..... 840
Line of sight, On the spectroscopic method of determining the velocity of stars in the, H. C. Vogel..... 203
The reduction of spectroscopic observations of motion in the, W. W. Campbell, 319; The motion of Nova Aurigæ in the, H. C. Vogel, 391; Researches on the radial motion of stars with the siderostat of the Paris observatory, H. Deslandres, 157; The iron spectrum as a comparison spectrum in spectroscopic determinations of stellar motion in the, H. C. Vogel, 151; The motion of Nova Aurigæ in the, H. C. Vogel.. 391
Lippmann, G., On the photography of colors (note)..... 524
Liveing, G. D., and J. Dewar, on the influence of pressure on the spectra of films..... 215
On the spectrum of liquid oxygen and on the refractive indices of liquid oxygen, nitrous oxide and ethylene..... 705
Liveing, On the line spectrum of hydrogen (note)..... 823
Lord, H. C., Exceptional solar disturbance (note)..... 738
Logarithmic tables by Hussey..... 543
Lunar atmosphere and the recent occultation of Jupiter, W. H. Pickering..... 778
Photographs, note on the, of Lick Observatory, by Roger Sprague (note), 348; Photographs of Lick Observatory reply by Professor Holden to R. Sprague..... 447
Lumsden, G. E., Peculiar appearance of Jupiter's IV satellite (note)..... 93
Lynn, W. T., Color of Sirius in ancient times (note)..... 634
Lyra, Spectrum of β Lyræ, E. C. Pickering..... 25
Photography of the ring nebula in..... 523
Lyra, On the central star in the ring nebula in, James E. Keeler (note)..... 824
Magnetism, as a source of light..... 525
Terrestrial, on the condition of the Sun's surface in June and July, 1892, as compared with the record of, G. E. Hale..... 917
Magnetic, Connection between Sun-spots and storms..... 527
Storm of February, 1892, in Mauritius, 525; The great Sun-spot and its influence (note), 527; Disturbances and aurora, 617; Sun-spots and —storms, 615; The—storm of Feb. 13-14, 1892 (note), 333; The Sun-spot, the—storm and the aurora, 316; Perturbations of Feb. 13 and 14, 1892, M. Moureaux, 318; Perturbations and the great Sunspot, 330; A—disturbance, (note) 332; A great—disturbance of 1892, Feb. 13-14, (note), 333; Disturbance and the great Sun-spot (note). 436 On the large Sun-spot of 1892, Feb. 5-18 and the associated—disturbance, 499; Sun-spot and—storm, F. H. Hesse (note), 615; The solar disturbances of July, 1892, and the accompanying—storms, Walter Sidgreaves..... 817
Map of eclipse stations, April 16, 1893..... 866
Mars, at opposition in 1892..... 541
Colors exhibited by the planet, W. H. Pickering, 449, 545; Professor W. H. Pickering's note on the color of (note), 632; By W. H. Pickering, study of surface markings, 668, 849; Is—inhabited? (note)..... 748

Mars, Observations of, at Halsted Observatory, N. J. by C. A. Young, 675; Meager news from, Lewis Swift, 678; Observations of, at the Washburn Observatory, George C. Comstock, 679; Observations of, at the Goodsell Observatory, H. C. Wilson, 684, Note on Mt. Hamilton Observations of, June-August, 1892, by Edward S. Holden, 663; Preliminary remarks on the observations of, 1892, with the 12-inch and 36-inch refractors of the Lick Observatory, by E. E. Barnard..... 680
Mars, Plates of, May 9-July 25, 1892, by W. H. Pickering, following page..... 672
Plate of, Aug. 14, 1892, by W. W. Campbell, following page 666; Plate of, Aug. 17, 1892, by W. J. Hussey, preceding page 667; Plate of, July 26, 1892, by C. A. Young, facing page 677; Plates of, Aug. 19 and 21, by E. E. Barnard, following page 684; Plates of, Aug. 13 and 26, by H. C. Wilson, following page 682; Terby's physical observations of, 478, 555; Path in the sky during 1892, 439; Satellite, pretended discovery of, 553; Photographs of the occultation, by the Moon, July 11, 1892, made at the Kenwood Observatory, George E. Hale, 610; Drawings of (note), 826; Occultation of, Sept. 3, 1892, by J. E. Keeler (note), 831; Cause of brightness of (note)..... 945
Marchand's theory of magnetic perturbation (note)..... 331
Mascart, M., On aberration..... 128
The magnetic storm Feb. 13, 14, 1892 (note), 333; On the mass of the Earth's atmosphere..... 930
Mass of the Earth's atmosphere (note)..... 930
Maunder, E. W., stars of the first and second types of spectrum.....145, 437
Area and position of the great Sun-spot, as determined at Greenwich, (note) 335; The great Sun-spot and its influence (note)..... 527
McClean's photographs of solar and metallic spectra..... 438
Measurements, on the application of interference methods to spectroscopic, A. A. Michelson..... 884
Meldrum, on the magnetic storm of Feb. 1892, in Mauritius (note)..... 525
Metallic films, absorption spectra of (note)..... 528
Meteor, a brilliant, observed by E. M. Wilson (note)..... 168
Meteors for August (note)..... 87
Meteors from comet 1882, I, possibility of seeing (note)..... 346
Meteors, the shower of Bielid..... 943
Meteorites, probable origin of, by George W. Coakley..... 753
The Mexican, by Professor Eastman (note)..... 351
Meteorite in court to determine title, by W. S. Pattee..... 841
Meteoric shower of Nov. 23, 1882 (note).....943, 944
Meudon observatory, Note on the Sun-spot observed at the, from Feb. 5 to Feb. 17, J. Janssen..... 334
Milky Way, Dark structures in the (note)..... 95
Dr. Bœddicker's drawings of (note).....351, 538
Minor Planets for 1891..... 535
For 1891, elements of, 627; Groups of, 785; New.....87, 168, 341, 443, 745
Miller, A. F., Observations of a solar prominence (note)..... 614
Minchin, G. M., Photo-electric cells..... 702
Minor planets discovered since Sept. 1, are seven..... 838
Mock suns, solar halos and, J. M. Boraston (note)..... 522
Monck, W. H. S., Sirian and Solar stars (note), 89; Comets and meteors (note), 171; The proper motions of stars (note), 253; A further note on comets and meteors (note) 274; On the spectra of binary stars, 326; On the spectra and proper motion of stars, 389, 700; Stars of the first and second types of spectrum, 437; On the relative albedo of planets, 776; Photo-electric effect of star light (note), 843; The proper motions of the stars..... 874
Moon, Photographs of the recent total eclipse of the (note)..... 160
Eclipsed, May 11, 1892, 447; Eclipsed, Nov. 4, 1892..... 834
Moon's heat, Distribution of the (note)..... 347
Phases, monthly.....84, 166, 244, 341, 442, 535, 624, 743, 833, 938
Motion, Investigation of stellar at Potsdam (note)..... 79
The iron spectrum as a comparison spectrum in spectroscopic determinations of stellar, in the line of sight, H. C. Vogel, 151; Researches on the radial, of stars with the siderostat of the Paris Observatory, H. Deslandres, 157; The reduction of spectroscopic observations of the, in the line of sight, W. W. Campbell, 319; On the spectra and proper, of stars, 700

Motion of Nova Aurigæ by Campbell 81
Mounting for large telescopes for field eclipse observations 257
Moureaux, M., magnetic perturbations of Feb. 13 and 14, 1892 318
National academy of sciences, Mrs. Henry Draper's reception to the 78
National physical laboratory (note) 740
Naval observatory, Change in management of (notes), 345, 630; Report of progress on the new (note) 88
Nebula, Photography of the ring, in Lyra, 523; A large new in Auriga, 523; On the central star of the ring, in Lyra, J. E. Keeler 824
Nebulæ, Discovery of, by Lewis Swift, 197; Measures of planetary, by Burnham (note), 174; Two new, discovered by H. C. Wilson, 247; Notes on new and old 566
Nebular hypothesis, lecture by J. E. Keeler 567, 768
Nebulosity about the Wolf-Rayet stars (note) 236
Neptune, historical note on the search for, by Professor Holden 287
Newall's observations of Nova Aurigæ (note) 828
New Jena glass, Mr. Brashear, remarks on, tarnishing 447
New star in Auriga, chart showing its place among the stars 249
Disappearing as shown by Thomas D. Anderson's letter in *Nature*, Feb. 18, 1892 (note), 346; Observations of Nova Aurigæ at Vassar College Observatory by M. W. Whitney, 461; A nebula as shown by observations of E. E. Barnard (note), 751; Agnes M. Clerke, 504; Ralph Copeland and E. S. Holden 233, 235
Nova Aurigæ, The visible spectrum of, by W. W. Campbell, 529; Dr. and Mrs. Huggins, 79, 571; Ralph Copeland, 593; Walter Sidgreaves, 604; Recent observations of, W. W. Campbell, 715; New outburst of (note), 737; The temporary star, G. Rayet, 291; Observations of the new star, made at Princeton, N. J., C. A. Young and Taylor Reed, 289; The motion, in the line of sight, H. C. Vogel, 391; A large new nebula near, observed by Schaeberle, 523; The new star in Auriga, E. C. Pickering, 228; by E. C. Pickering, 417; On the visible spectrum of the new star in Auriga, 231; The new star in Auriga (note), 328, 434; A change in the spectrum of, E. C. Pickering, 330; The spectrum of, in Feb. and March, 1892, W. W. Campbell, 799; Recent observations of, Sept. 8 to Oct. 13, 1892, W. W. Campbell, 820; Note, 828; Professor Seeliger's explanation of (note), 929; The motion of, W. W. Campbell; 881; Note on the revival of, W. Sidgreaves 882
Newton, H. A., capture of comets by planets 12
New star in the constellation of Auriga, on the, H. Seeliger 904
News and notes 88, 172, 252, 345, 446, 538, 628, 748, 839, 944
Nice Observatory Spectroscopy at the, (note) 79
Night clouds, Request for observations of 859
Nitrous oxide, The refractive index of—G. D. Liveing and J. Dewar 705
Objective-prism, The, E. C. Pickering 199
A new combined visual and photographic, (note), 928; Of the Yerke's Observatory, the 40-inch, George E. Hale, (note) 925
Observatory stations, eclipse April 16, 1893 865
Old and new astronomy, (note) 163
Occultation at Underwood Observatory 627
Of Mars, observed June 10, 1892, by Frank E. Seagrave 627
Of Mars, observed Sept. 3, 1892 by H. A. Howe 745
Occultations of stars by planets 168, 246, 340, 442, 623
Visible at Washington 85, 167, 247, 341, 440, 531, 622, 745, 832, 939
Oxygen, On the spectrum of liquid, and on the refractive indexes of liquid, nitrous oxide and ethelene, G. D. Liveing and J. Dewar 705
Paris Observatory Spectroscopic work at the (note) 78
Researches on the radial motions with the siderostat of the, H. Deslandres, 157; New director of, F. M. Tisserand, 839; Annual report of, for 1891, Admiral Mouchez (note) 540
Pattee, Hon. W. S., An aerolite in court 841
Pendulum, A free escapement with a perfectly independent balance or, by Appel 872
Personal explanation, by C. B. Hill about credits in print 254
Phenomena of Jupiter's Satellites 938
Photo-chronograph for latitude work, review of paper published by Geo. A. Fargis, Georgetown Observatory (note) 633

Photo-electric cells, G. M Minchin..... 702
Effect of starlight, W. H. S. Monck (note), 843; Effect of starlight, S. M. Dixon (note)..... 844
Photographs of the *b* group in the solar spectrum, Walter Sidgreaves (note) 79
Of the recent total solar eclipse of the Moon (note)..... 160
Photographic chart of the sky, H. C. Wilson (note)..... 632
Method of determining star transits, F. H. Bigelow, 42; Halation and its remedy (note), 236; A new, photometer for determining star magnitudes, W. E. Wilson, 307; Comparative, spectra of the Sun and metals by F. McClean (note), 336; And photometric stellar magnitudes (note), 437; Comparative, spectra of the high Sun and the low Sun by F. McClean (note), 438; And visual magnitudes of stars, *Nature*, 482; Search for a planet beyond the orbit of Neptune, Isaac Roberts, 554; Some results and conclusions derived from a, study of the Sun, George E. Hale, 811: Objective, a new combined visual and (note) 928
Photographs of celestial objects compared (note)..... 634
Of solar phenomena obtained with the spectroheliograph of the Kenwood Astro-physical Observatory, Geo. E. Hale, 603; Of the occultation of Mars by the Moon, July 11, 1892, made at the Kenwood Astro-Physical Observatory, Geo. E. Hale..... 610
Photography of colors, M. Lippmann..... 524
Of the ring nebula in Lyra, 523; The portrait lens in stellar, 524; The new enlarging photographic lens, S. W. Burnham, 558; On astronomical, with commercial lenses, Wm. Harkness, 641; Recent results in solar prominence, G. E. Hale, 70; Progress of solar, at the Kenwood Observatory, 235; Of the great Sun-spot at the Lick Observatory, W. W. Campbell (note), 334; Solar, at the Kenwood Observatory, Geo. E. Hale, 407; The grating in stellar spectrum (note), 437; Solar prominence, Evershed (note), 827; Photographing the ultra-violet rays (note)..... 829
Photometer, A new photograpic, for determining star magnitudes, W. E. Wilson..... 307
Photographic and photometric stellar magnitudes..... 437
Photosphere, The spectra of Sun-spots and the (note)..... 241
Pickering, E. C., Distribution of energy in stellar spectra..... 22
Spectrum of β Lyræ, 25; The objective prism, 199; The new star in Auriga, 228; Nova Aurigæ (note), 750; A change in the spectrum of Nova Aurigæ, 330; A new variable star (note), 752; Groups of stars of the 5th type in Cepheus, 235; A large southern telescope..... 783
Pickering, William H., The mountain station of the Harvard College Observatory..... 353
The Boyden station of the H. C. observatory, 357; Colors exhibited by the Planet Mars, 449, 545; The earthquake of Feb. 23, 1892, 470; Note on the color of Mars, 632; The planet Saturn and its satellites, 649; Mars, 668, 849; The lunar atmosphere and the recent occultation of Jupiter, 778; Plate XXXVIII, occultation of Jupiter, following page 780; Occultation of Jupiter by the Moon..... 778
Planet beyond Neptune, Photographic search for, Isaac Roberts..... 554
Planet notes and tables for the year,.....80, 163, 243, 337, 438, 529, 619, 742, 831, 936
Planets, On the relative albedo of, W. H. S. Monck..... 776
Planets, new minor..... 939
Plassmann, J., The true form of Algol's light curve..... 419
Porter, J. G., The motion of the solar system..... 764
Portrait lens in stellar photography (note)..... 524
Potsdam, Investigation of stellar motion at (note)..... 79
Pressure, On the influence of, on the spectra of flames, G. D. Liveing and J. Dewar..... 215
Pressure, The effect of, upon the transmission of radiant energy through gaseous media, S. J. Corrigan.....1, 108
Pringsheim on Kirchhoff's law, Henry Crew..... 581
Prism, The objective, E. C. Pickering..... 199
Pritchett, H. S., The total solar eclipse April 15-16, 1893..... 454
Prominence, Fall of a solar, into the opening of a spot, M. E. L. Trouvelot... 124
Recent results in solar, photography, G. E. Hale, 70; The enormous velocity of a solar, observed June 17, 1891, J. Fényi, 63; On a remarkable, H. Deslandres..... 502

Prominence, On a, of extraordinary height observed May 5, 1892, Julius Fényi, 609; The eruptive, of July 9, 1891, 240; Observations of eruptive, E. E. Read, Jr., 335; Observations of a solar, A. F. Miller (note), 614; Solar, photography, Evershed (note) 827
Prominences, Effect of aberration on measures of solar 90, 160
The bright solar, of Sept. 10, 1891, Walter Sidgreaves, 66; Note on the measurement of solar, Dr. H. Crew (note), 90; Remarks on the influence of the aberration of light on spectroscopic observations of solar prominences, M. Fizeau, 126; The distribution of solar, of 1891, J. Evershed Jr., 426; Observations with small telescopes, 438; Notes on the use of the spectroscope for sketching solar prominences, and for observing the spectra of spots and, W. Sidgreaves, 136; The ultra-violet spectrum of the solar, Geo. E. Hale 50, 602, 618, 821
Proper motion of stars, by W. H. S. Monck, 253; Of Σ 1604, S. W. Burnham, 870; Of the stars, W. H. S. Monck 874

Solar investigations, note on recent, G. E. Hale 159
Solar lines, do — vary in intensity (note) 79
Solar observations, resumé of, made at the Royal Observatory of the Roman College during the fourth quarter of 1891, P. Tacchini, 214; during the first quarter of 1892, P. Tacchini 520, 710
Distribution in latitude of solar phenomena observed during the second quarter of 1892, P. Tacchini 711
At Mt. Hamilton (note) 824
Solar parallax, note by H. C. Wilson 95
Solar phenomena, notes on the use of the spectroscope for sketching, and for observing the spectra of spots and prominences, W. Sidgreaves 136
Observed on the great spot group of February, 1892, Julius Fényi 430
On the distribution in latitude of, observed at the Royal Observatory of the Roman College during the first half of 1891, P. Tacchini, 134; During the second half of 1891, 424; First quarter of 1892, 608; photographs of, obtained with the spectroheliograph at the Kenwood Astrophysical observatory, George E. Hale, 603; The distribution of solar prominences for 1891, J. Evershed, Jr. 426
Solar photography, progress of, at the Kenwood Astro-Physical Observatory, George E. Hale 407, 741
Comparative spectra of high Sun and low Sun, F. McClean 438
Solar prominence, the bright, of Sept. 10, 1892, W. Sidgreaves 66
Photography, recent results in, George E. Hale, 70; by Evershed (note).. 827
The fall of a, into the opening of a spot, E. L. Trouvelot 124
The enormous velocity of a, observed June 17, 1891, Julius Fényi 63
The eruptive, of July 9, 1891 (note), 240; observations with small telescopes (note), 438; On a remarkable, H. Deslandres, 502; On a, of extraordinary height, observed May 5, 1892, J. Fényi, 609; observation of a, A. F. Miller (note) 614
Solar prominences, note on the measurement of, Henry Crew 90
The distribution of in 1891, J. Evershed, 426; The ultra-violet spectrum of the, George E. Hale, 50, 602, (note) 618, 821; Observations of eruptive, by E. Read at Camden, N. J. (note) 335
Solar spectrum, photograph of the *b* group in the, W. Sidgreaves (note)..... 79
Some recent studies of the, A. L. Cortie 393
Solar spots and faculæ, Note on the Stonyhurst drawings of the, Walter Sidgreaves, 212; The large Sun-spot group of Aug. 28 and Oct. 4, 1891, A. L. Cortie, 130; The cyclone theory of Sun-spots, F. H. Collins (note).... 826
Solar work at the Lick Observatory 78
Spark, on the physical characteristics of the lines in the, spectra of the elements, W. N. Hartley 223

Spectra, Comparative photographic, of the high Sun and the low Sun, by F. McClean (note), 438; Of flames, on the influence of pressure on the, G. D. Liveing and J. Dewar, 215; Of the elements, on the physical characteristics of the lines in the spark, W. N. Hartley, 223; On the line, of the elements, C. Runge, 496; Kayser and Runge, 522; On the, of binary stars, W. H. S. Monck, 326; Comparative photographic, of the Sun metals, F. McClean (note), 336; M. Lecoq de Boisbaudran's observations on the electric, of gallium (note), 520; Absorption of metallic films (note), 528; Of stars with large proper motion, J. E. Gore, 11; Distribution of energy in stellar, E. C. Pickering, 22; Stars having peculiar, M. Fleming, 27, 418, 765; The, of stars in the Milky Way, J. E. Gore, 326; On the, and proper motions of stars, W. H. S. Monck, 389; Stars of first and second types of spectrum, W. H. S. Monck (note), 437; On the, and proper motions of stars, W. H. S. Monck, 700; Of Sun-spots and the photosphere (note), 241, Of Sun-spots and the chromosphere (note), 613; Notes on the use of the spectroscope for sketching solar phenomena, and for observing the, Walter Sidgreaves, 136; Observations of Sun-spot (note), 162; On the physical characteristics of the line in the, of the elements, W. N. Hartly 223
Spectrograph, Herr Schumann's new vacuum 237
On the method of determining the velocity of stars in the lines of sight, H. C. Vogel 203
Spectroheliograph of the Kenwood Observatory, 159, 235, 310, 331, 407, 436, 603, 611, 741, 792, 815
Spectrometer, A new proof of a fundamental equation of the 932
Spectroscope, A novel stellar (note) 79
A small, by Mr. Brashear (note), 930; Notes on the use of the, for sketching solar phenomena and for observing the spectrum of the spots and prominences, W. Sidgreaves, 136; Professor Young's new universal, 78; The objective prism, E. C. Pickering, 199; The star, of the Lick Observatory, J. E. Keeler, 140; The modern, 28, 140, 199, 292; The new, of the Halsted Observatory, C. A. Young, 292; The concave grating in theory and practice, J. S. Ames 28
Spectroscopic determinations, Recent, Johnstone theory (note) 935
Spectroscopic measurements, On the application of interference methods to, A. A. Michelson 884
Spectroscopic observations of solar prominences, Remarks on the influence of the aberration of light on, M. Fizeau 126
Observations of the great Sun-spot group of Feb. 1892, G. E. Hale, 310; Observations of the motions in the line of sight, the reductions, W. W. Campbell, 319; Note on, investigations at the physical institution of the Royal Swedish Academy of Sciences, B. Hasselberg, 793; Study of the Sun, comparison with the new star in Auriga, new results on hydrogen, obtained by H. Deslandres, 712; Work at the Paris observatory (note) 78
Spectroscopy at Nice Observatory (note), 79; at the Paris Observatory 78
Spectrum, Herr Schumann's discoveries in the ultra-violet hydrogen spectrum 160
On the, of liquid oxygen, and on the refractive indices of liquid oxygen, nitrous oxide and ethylene, Liveing and Dewar, 705; The ultra-violet, of the solar prominences, George E. Hale, 50, 602, 618 (note), 821; Lecoq de Boisbaudran's observations on the electric spectra of Gallium, 520; Of comet *a* 1892 (Swift), W. W. Campbell, 523, 698; Absorption spectra of metallic films, 528; Schumann's researches on the extreme ultra-violet part of the (note), 825; Of the aurora of Feb. 13, 1892 (note), 237; Note on the chromosphere spectrum, C. A. Young, 59; Of the solar prominences, the ultra-violet, G. E. Hale (note), 602, 618; Of Holmes comet, J. E. Keeler, 929; Note on the, of the large Sun-spot group of Feb., 1892, Henry Crew, 308; Some recent studies on the solar, A. L. Cortie, 393; New results on hydrogen, obtained by spectroscopic study of the Sun, comparison with the new star in Auriga, H. Deslandres, 712; The ultra-violet, of the solar prominences, George E. Hale, 50, 602, 618, 821; Of Nova Aurigæ, Copeland, 233; Huggins, 234, 329, 571; Lockyer, 234, 328; Pickering, 228, 330, 417, 750; Campbell, 235, 529, 715, 799, 820, 881; Young and Reed, 289; Rayet, 291; Common, 328; Vogel, 329, 391; Sidgreaves, 330, 604, 822; Frost, 731; Von Gothard, 434; Maunder, 434; Copeland and Becker, 593; Delandres, 712

Spectrum, of Nova Aurigæ, Espin, 737, 828; Newall, 828; Seeliger, 904; Of the new star in Auriga, on the visible, H. Crew, 231; On the chromosphere spectrum, C. A. Young, 59; Of β Lyræ, E. C. Pickering, 25; Of stars of first and second type, E. W. Maunder, 145; Monck, 437; On the visible spectrum of Nova Aurigæ, W. W. Campbell, 529; A change in the, of Nova Aurigæ, E. C. Pickering, 330; The, of Nova Aurigæ in Feb. and and March 1892, W. W. Campbell, 799; On the limit of visibility of the different rays of the, W. de W. Abney, 298; The iron, as a comparison spectrum in spectroscopic determinations of stellar motions in line of sight, H. C. Vogel, 151; Of abuminium oxide, H. Hasselberg, 793; Spectroscopic observations of the great Sun-spot group of Feb. 1892, G. E. Hale, 310; Comparative photographic spectra of the high Sun, the low Sun, F. McLean, 438; Notes on the spectra of Sun-spots, A. L. Cortie, 587; Some recent studies of the solar, A. L. Cortie, 393; The grating in stellar, photography (note), 437; Line, of hydrogen in the oxyhydrogen flame (note) 823

Sprague, Roger, Translation of Dr. Terby's article on physical observations of Mars 478

Stahn, J., Observation of eclipse, Oct. 20, 1892 839

Star, A new, in Auriga, Ralph Copeland, 233; W. Huggins, 234, 571; E. S. Holden, 235; On the visible spectrum of the new in Auriga, H. Crew, 231; The visible spectrum of Nova Aurigæ, W. W. Campbell, 529; Observations of the new, in Auriga, made at Princeton, C. A. Young and Taylor Reed, 289; A new photograph photometer for determining star magnitudes, W. E. Wilson, 307; Camera of the Sidney Observatory (note), 631; The new in Auriga, E. C. Pickering, 228; Agnes M. Clerke, 504; R. Copeland, 593; Spectroscope of the Lick Observatory J. E. Keeler, 140; On the central, in the ring nebula in Lyra, J. E. Keeler, 824; Nova Aurigæ (note), 828; Light, the photo-electric effect of, W. H. S. Monck (note), 843; The temporary, in Auriga, G. Rayet, 291; Motion of Nova Aurigæ in the line of sight, H. C. Vogel, 391; The new in Aurigæ, 434, 328; A new variable in Aries, J. M. Schaeberle (note), 751; E. C. Pickering, 752; Σ 1604, proper motion of, by Burnham 870

Star search, Aids to temporary (note) 944

Stars, group of, of the fifth type in Cepheus 235

Having peculiar spectra, M. Fleming, 27, 418, 765, Note on the new binary, S. W. Burnham, 268; In the Draper Catalogue, proper motion of, W. H. S. Monck (note), 253; On the spectroscopic method of determining the velocity of, in the line of sight, H. C. Vogel, 203; The reduction of spectroscopic observations of motion in the line of sight, W. W. Campbell, 319; Observations of the new star in Auriga, C. A. Young and Taylor Reed, 289; Observations of Nova Aurigæ at Vassar College, M. W. Whitney, 461; The new star in Auriga, Agnes M. Clerke, 504; On Nova Aurigæ, Dr. and Mrs. Huggins, 571, Ralph Copeland, 593; Of first and second types of spectrum, E. W. Maunder, 145, W. H. S. Monck (note), 437; Nova Aurigæ, E. C. Pickering, 417; The true form of Algol's light curve, J. Plassmann, 419; Nebulosity about the Wolf-Rayet stars, (note), 236; On the spectra of binary, 326, The proper motion of the, W. H. S. Monck, 874; In the Milky Way, on the spectra of, J. E. Gore, 326; Photographic method of determining star-transits, F. H. Bigelow, 42; Photographic and photometric stellar magnitudes, 437; The grating in stellar spectrum photography, 437; Researches, on the radial motion of, with the siderostat of the Paris Observatory, H. Deslandres, 157; Sirian and solar, W. H. S. Monck (note), 89; The spectra of, with large proper motion, J. E. Gore, 11; On the spectra and proper motions of, W. H. S. Monck.....389, 700

Stellar magnitudes, photographic and photometric (note) 437

Photographic and visual, 482; Motions, investigation of, at Potsdam, (note), 79; The reduction of spectroscopic observations of motion in the line of sight, W. W. Campbell, 319; Motion, the iron spectrum, as a comparison spectrum in spectrographic determination of, in line of sight, H. C. Vogel, 151; On the spectrographic method of determining the velocity of stars in the line of sight, H. C. Vogel, 203; The motion of Nova Auriga in the line of sight, H. C. Vogel, 391; Researches on the radial motion of stars with the siderostat of the Paris Observatory, H. Deslandres, 157; Photography, the portrait lens in (note)..... 425
